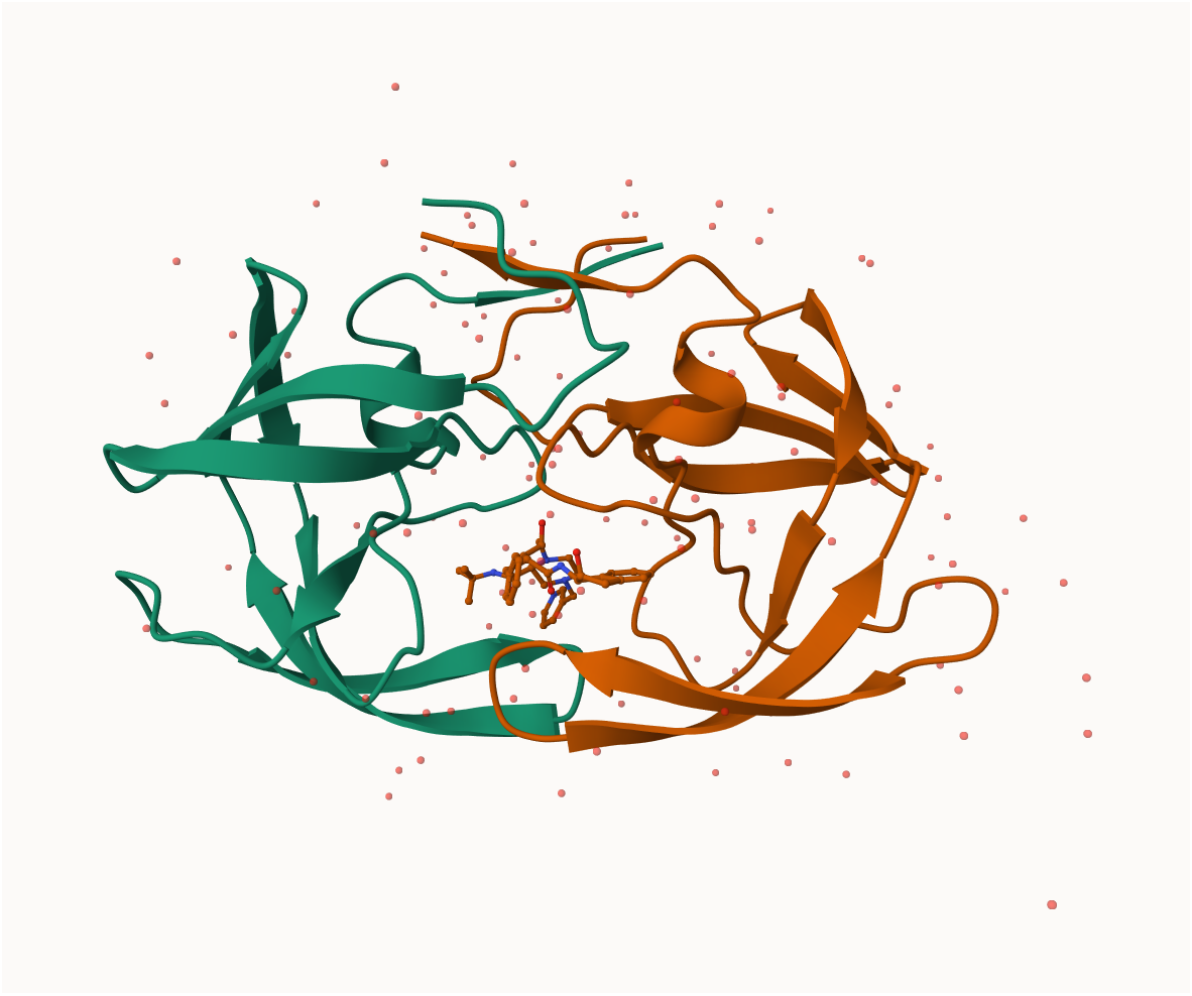
##Visualizing structure data

The Mol* viewer is embedded in many bioinformatics websites. The homepage is https://molstar.org I can insert any figure or image file using markdown format



> Q4: Water molecules normally have 3 atoms. Why do we see just one atom per water molecule in this structure?

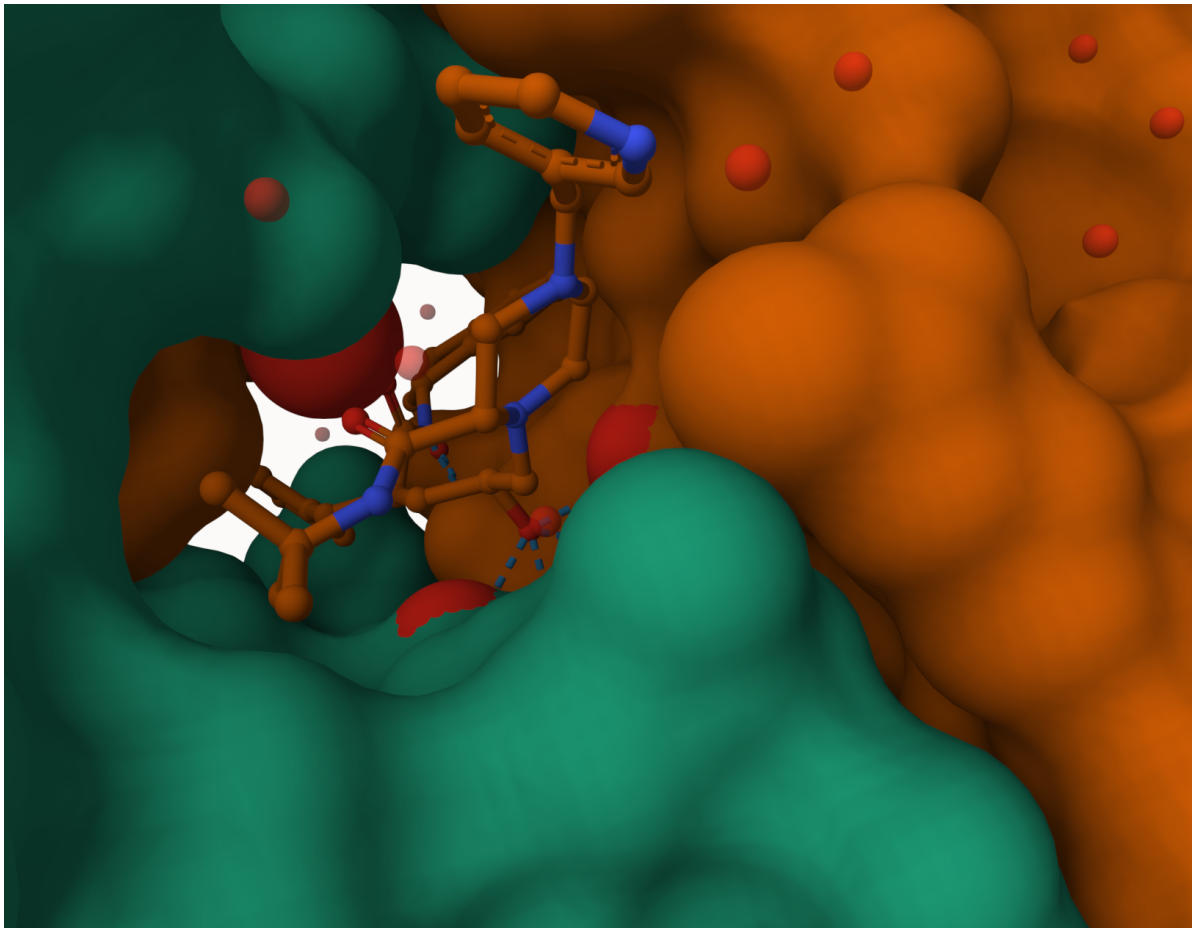
Because of Hydrogen bonding, so only the oxygen is most visible.

> Q5: There is a critical "conserved" water molecule in the binding site. Can you identify this water molecule? What residue number does this water molecule have

It is HOH 308

> Q6: Generate and save a figure clearly showing the two distinct chains of HIV-protease along with the ligand. You might also consider showing the catalytic

residues ASP 25 in each chain and the critical water (we recommend "Ball & Stick" for these side-chains). Add this figure to your Quarto document.



Bio3D package for structural bioinformatics

We can use the bio3D package to read and analyze biomolecular data in R:

```
library(bio3d)

hiv <- read.pdb("1HSG")
```

```
  Note: Accessing on-line PDB file
```

```
hiv
```

```
 Call:  read.pdb(file = "1HSG")

   Total Models#: 1
     Total Atoms#: 1686,  XYZs#: 5058  Chains#: 2  (values: A B)

     Protein Atoms#: 1514  (residues/Calpha atoms#: 198)
     Nucleic acid Atoms#: 0  (residues/phosphate atoms#: 0)

     Non-protein/nucleic Atoms#: 172  (residues: 128)
     Non-protein/nucleic resid values: [ HOH (127), MK1 (1) ]

   Protein sequence:
      PQITLWQRPLVTIKIGGQLKEALLDTGADDTVLEEMSLPGRWKPKMIGGIGGFIKVRQYD

Q10. Which of the packages above is found only on BioConductor and not CRAN?

msa

Q11. Which of the above packages is not found on BioConductor or CRAN?:

BiocManager

Q12. True or False? Functions from the devtools package can be used to install packages from GitHub and BitBucket?

TRUE

Lets trip to chain A and get just its sequence:

```
chainA <- trim.pdb( hiv, chain = "A")
chainA.seq <- pdbseq(chainA)
```

Let's blast

```
#blast <- blast.pdb(chainA.seq)
```

```
#head(blast$hit.tbl)
```

```
#plot(blast)
```

```
#hits <- plot(blast)
#hits$pdb.id
hits <- NULL
hits$pdb.id <- c('1AKE_A','6S36_A','6RZE_A','3HPR_A','1E4V_A','5EJE_A','1E4Y_A','3X2S_A','6H
```

Prediction of functional motions

We can run a Normal Mode Analysis (NMA) to predict large scale motions/flexibility/dynamics of any biomolecule that we can read into R.

Let's look at ADK and chain A only!

```
adk <- read.pdb("1ake")
```

```
  Note: Accessing on-line PDB file
   PDB has ALT records, taking A only, rm.alt=TRUE
```

```
adk_A <- trim.pdb(adk, chain="A")
adk_A
```

```
 Call:  trim.pdb(pdb = adk, chain = "A")

   Total Models#: 1
     Total Atoms#: 1954,  XYZs#: 5862  Chains#: 1  (values: A)
```

```
    Protein Atoms#: 1656  (residues/Calpha atoms#: 214)
    Nucleic acid Atoms#: 0  (residues/phosphate atoms#: 0)

    Non-protein/nucleic Atoms#: 298  (residues: 242)
    Non-protein/nucleic resid values: [ AP5 (1), HOH (241) ]

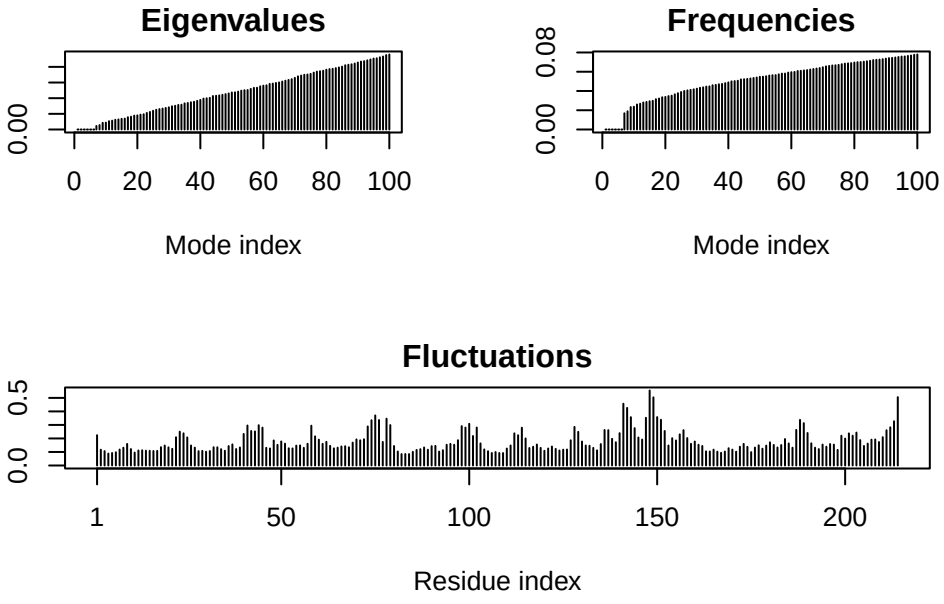
  Protein sequence:
     MRIILLGAPGAGKGTQAQFIMEKYGIPQISTGDMLRAAVKSGSELGKQAKDIMDAGKLVT
     DELVIALVKERIAQEDCRNGFLLDGFPRTIPQADAMKEAGINVDYVLEFDVPDELIVDRI
     VGRRVHAPSGRVYHVKFNPPKVEGKDDVTGEELTTRKDDQEETVRKRLVEYHQMTAPLIG
     YYSKEAEAGNTKYAKVDGTKPVAEVRADLEKILG

+ attr: atom, helix, sheet, seqres, xyz,
        calpha, call
```

```
m <- nma(adk_A)
```

```
 Building Hessian...        Done in 0.008 seconds.
 Diagonalizing Hessian...   Done in 0.171 seconds.
```

```
plot(m)
```



Lets write out a "trajectory" of predicted motion

```
mktrj(m, file="adk_nma.pdb")
```

Play with 3D viewing in R

We can use the new **bio3dview** package, which is not yet on CRAN, to render interactive 3D views in R and HTML quarto output reports.

To install from GitHub we can use the **pak** package.

```
pak::pak("bioboot/bio3dview")
```

```
  Loading metadata database

  Loading metadata database ... done

  No downloads are needed

  1 pkg + 40 deps: kept 40 [3.4s]
```

```
library(bio3dview)
#view.pdb(adk)
```

```
library(bio3d)
aa <- get.seq("1ake_A")
```

```
Warning in get.seq("1ake_A"): Removing existing file: seqs.fasta

Fetching... Please wait. Done.
```

Q13. How many amino acids are in this sequence, i.e. how long is this sequence?

214

now use this sequence as a query to blast search the PDB to find similar sequences and structures

```
b <- blast.pdb(aa)
```

```
 Searching ... please wait (updates every 5 seconds) RID = GX7JP5NP014
 .................................................................
 Reporting 94 hits
```

```

Q14. What do you note about this plot? Are the black and colored lines similar or different? Where do you think they differ most and why?

The plot's red lines have the most fluctuations while the black and green are most similar. The black and green most differ from red at the residues of ~120-155, so this might have something to do with mutations in chain A?
